

# Growing to Serve You Even Better!

Watson Metal Masters broke ground on our Phase II Expansion on February 14, 2017. This ambitious project will more than double our shop floor space while adding many new high production automated machines, which will increase product quality while reducing cost.

New work centers will be added to gain the benefits of specialized talent and equipment. Six new overhead bridge cranes will increase our handling capabilities and aid in the manufacturing process. The new Faccin CNC plate roll and two new Plasma-TIG round seam manipulators will increase throughput and quality. We are installing a new CNC spin polisher and 400 Ton x 14' press brake.

Watson Metal Masters is continuing our pledge to stay on the leading edge of technology by purchasing only the very best equipment and training personnel on safety and performance requirements.
